

ReportBro Designer is a Javascript library, making it a perfect fit to your web application. The server library is a stand-alone Python package and you can use it with your favourite web framework, like Flask, Django, web2py, Pyramid, Tornado, Bottle, TurboGears, CherryPy and Web.py.

The ReportBro framework consists of a client and a server part, the ReportBro Designer and ReportBro Lib.

The reportbro-lib package is a Python library to generate reports designed with ReportBro Designer. It can be installed on your Python webserver and integrated into your web application.

Integrate ReportBro Designer seamlessly into your web application and create your custom report templates.
